Preface	xi
1. Introduction	1
1.1 What Is a Robot?	1
1.2 Robot Components	3
1.3 Robot Degrees-of-Freedom	6
1.4 Robot Classification	10
1.4.1 Serial Robots	10
1.4.2 Parallel Robots	13
1.4.2.1 The Stewart–Gough Platform	14
1.4.2.2 The Delta Robot	17
1.4.3 Cable-Driven Parallel Robots	18
1.5 The Aims and Scope of This Book	21
2. Motion Representation	23
2.1 Spatial Motion Representation	23
2.1.1 Position of a Point	24
2.1.2 Orientation of a Rigid Body	24
2.1.2.1 Rotation Matrix	25
2.1.2.2 Rotation Matrix Properties	27
2.1.2.3 Screw Axis Representation	31
2.1.2.4 Euler Angles	35
2.2 Motion of a Rigid Body	42
2.3 Homogeneous Transformations	44
2.3.1 Homogeneous Coordinates	44
2.3.2 Homogeneous Transformation Matrix	45
2.3.3 Screw Displacement	47
2.3.4 Transformation Arithmetics	49
2.3.4.1 Consecutive Transformations	49
2.3.4.2 Inverse Transformation	52
Problems	53
3. Kinematics	59
3.1 Introduction	59
3.2 Loop Closure Method	61
3.3 Kinematic Analysis of a Planar Manipulator	62
3.3.1 Mechanism Description	62
3.3.2 Geometry of the Manipulator	63
3.3.3 Inverse Kinematics	63
3.3.4 Forward Kinematics	65
3.3.5 Simulations	66

3.4	Kinematic Analysis of Shoulder Manipulator	69
3.4.1	Mechanism Description	69
3.4.2	Geometry of the Manipulator	71
3.4.3	Inverse Kinematics	73
3.4.4	Forward Kinematics	74
3.4.5	Simulations	75
3.5	Kinematic Analysis of Stewart–Gough Platform	77
3.5.1	Mechanism Description	77
3.5.2	Geometry of the Manipulator	78
3.5.3	Inverse Kinematics	79
3.5.4	Forward Kinematics	80
3.5.4.1	Background Literature	80
3.5.4.2	Analytical Solution	82
3.5.4.3	Numerical Solution	87
3.5.5	Simulations	88
3.5.5.1	Analytical Solution	89
3.5.5.2	Numerical Solution	91
	Problems	95
4.	Jacobians: Velocities and Static Forces	111
4.1	Introduction	111
4.2	Angular and Linear Velocities	112
4.2.1	Angular Velocity of a Rigid Body	112
4.2.1.1	Angular Velocity and Rotation Matrix Rate	113
4.2.1.2	Angular Velocity and Euler Angles Rate	114
4.2.2	Linear Velocity of a Point	114
4.2.3	Screw Coordinates	116
4.3	Jacobian Matrices of a Parallel Manipulator	118
4.4	Velocity Loop Closure	119
4.5	Singularity Analysis of Parallel Manipulators	120
4.5.1	Inverse Kinematic Singularity	121
4.5.2	Forward Kinematic Singularity	121
4.5.3	Combined Singularity	122
4.6	Jacobian Analysis of a Planar Manipulator	122
4.6.1	Velocity Loop Closure	122
4.6.2	Singularity Analysis	125
4.6.3	Sensitivity Analysis	126
4.7	Jacobian Analysis of Shoulder Manipulator	127
4.7.1	Velocity Loop Closure	128
4.7.1.1	Jacobian of the Actuated Limbs	128
4.7.1.2	Jacobian of the Passive Limb	129
4.7.2	Singularity Analysis	130
4.8	Jacobian Analysis of the Stewart–Gough Platform	132
4.8.1	Velocity Loop Closure	132
4.8.2	Singularity Analysis	134
4.8.2.1	Background Literature	134
4.8.2.2	A 3–6 Stewart–Gough Platform	136
4.9	Static Forces in Parallel Manipulators	139
4.9.1	Free-Body Diagram Approach	139

4.9.2	Virtual Work Approach	140
4.9.3	Static Forces of a Planar Manipulator	142
4.9.4	Static Forces of Shoulder Manipulator	144
4.9.5	Static Forces of the Stewart–Gough Platform	146
4.10	Stiffness Analysis of Parallel Manipulators	147
4.10.1	Stiffness and Compliance Matrices	148
4.10.2	Transformation Ellipsoid	149
4.10.3	Stiffness Analysis of a Planar Manipulator	151
4.10.4	Stiffness Analysis of Shoulder Manipulator	153
4.10.5	Stiffness Analysis of the Stewart–Gough Platform	155
	Problems	159
5.	Dynamics	167
5.1	Introduction	167
5.2	Dynamics of Rigid Bodies: A Review	169
5.2.1	Acceleration of Rigid Bodies	169
5.2.1.1	Angular Acceleration of a Rigid Body	170
5.2.1.2	Linear Acceleration of a Point	170
5.2.2	Mass Properties	171
5.2.2.1	Center of Mass	172
5.2.2.2	Moments of Inertia	172
5.2.2.3	Principal Axes	173
5.2.2.4	Inertia Matrix Transformations	173
5.2.3	Momentum and Kinetic Energy	174
5.2.3.1	Linear Momentum	174
5.2.3.2	Angular Momentum	175
5.2.3.3	Kinetic Energy	176
5.2.4	Newton–Euler Laws	177
5.2.5	Variable-Mass Systems	178
5.3	Newton–Euler Formulation	180
5.3.1	Dynamic Formulation of a Planar Manipulator: Constant Mass Treatment	181
5.3.1.1	Acceleration Analysis	181
5.3.1.2	Dynamic Formulation of the Limbs	182
5.3.1.3	Dynamic Formulation of the Moving Platform	184
5.3.1.4	Forward Dynamics Simulations	185
5.3.1.5	Inverse Dynamics Simulation	190
5.3.2	Dynamic Formulation of a Planar Manipulator: Variable-Mass Treatment	193
5.3.2.1	Acceleration Analysis	193
5.3.2.2	Dynamic Analysis of the Limbs	196
5.3.3	Dynamic Formulation of the Stewart–Gough Platform	199
5.3.3.1	Acceleration Analysis	199
5.3.3.2	Dynamic Formulation of the Limbs	202
5.3.3.3	Dynamic Formulation of the Moving Platform	206
5.3.4	Closed-Form Dynamics	207
5.3.4.1	Closed-Form Dynamics of the Limbs	207
5.3.4.2	Closed-Form Dynamics of the Moving Platform	209

5.3.4.3	Closed-Form Dynamics of the Stewart–Gough Manipulator . . .	210
5.3.4.4	Forward Dynamics Simulations	211
5.3.4.5	Inverse Dynamics Simulation	215
5.4	Virtual Work Formulation	221
5.4.1	D’Alembert’s Principle	221
5.4.2	Principle of Virtual Work	222
5.4.3	Dynamic Formulation of a Planar Manipulator: Constant Mass Treatment	225
5.4.4	Formulation Verification	227
5.4.5	Dynamic Formulation of a Planar Manipulator: Variable Mass Treatment	228
5.4.6	Dynamic Formulation of the Stewart–Gough Platform	229
5.5	Lagrange Formulation	232
5.5.1	Generalized Coordinates	232
5.5.2	Lagrange Equations of the Second Kind	234
5.5.3	Lagrange Equations of the First Kind	236
5.5.4	Dynamic Formulation Properties	237
5.5.4.1	Mass Matrix Properties	238
5.5.4.2	Linearity in Parameters	239
5.5.4.3	Coriolis and Centrifugal Vector Properties	239
5.5.5	Dynamic Formulation of a Planar Manipulator	243
5.5.5.1	Dynamic Formulation of the Limbs	245
5.5.5.2	Dynamic Formulation of the Moving Platform	249
5.5.5.3	Dynamic Formulation of the Whole Manipulator	250
5.5.6	Dynamic Analysis of the Stewart–Gough Platform	252
5.5.6.1	Dynamic Formulation of the Limbs	253
5.5.6.2	Dynamic Formulation of the Moving Platform	258
5.5.6.3	Dynamic Formulation of the Whole Manipulator	260
Problems	260
6.	Motion Control	269
6.1	Introduction	269
6.2	Controller Topology	270
6.3	Motion Control in Task Space	274
6.3.1	Decentralized PD Control	274
6.3.2	Feed Forward Control	275
6.3.3	Inverse Dynamics Control	277
6.3.4	Partial Linearization IDC	279
6.4	Robust and Adaptive Control	282
6.4.1	Robust Inverse Dynamics Control	283
6.4.2	Adaptive Inverse Dynamics Control	289
6.5	Motion Control in Joint Space	292
6.5.1	Dynamic Formulation in the Joint Space	293
6.5.2	Decentralized PD Control	294
6.5.3	Feed Forward Control	295
6.5.4	Inverse Dynamics Control	297
6.6	Summary of Motion Control Techniques	299
6.6.1	Dynamic Formulations	300
6.6.2	Decentralized PD Control	300

6.6.3	Feed Forward Control	300
6.6.4	Inverse Dynamics Control	301
6.6.5	Partial Linearization IDC	301
6.6.6	Robust Inverse Dynamics Control	301
6.6.7	Adaptive Inverse Dynamics Control	302
6.7	Redundancy Resolution	303
6.7.1	Introduction	303
6.7.2	Problem Formulation	304
6.7.3	Lagrange and Karush–Kuhn–Tucker Multipliers	307
6.7.4	Iterative Solutions	310
6.7.4.1	Numerical Methods	310
6.7.4.2	An Iterative-Analytical Method	312
6.8	Motion Control of a Planar Manipulator	316
6.8.1	Decentralized PD Control	316
6.8.2	Feed Forward Control	323
6.8.3	Inverse Dynamics Control	327
6.8.4	Partial Linearization IDC	333
6.8.5	Robust Inverse Dynamics Control	335
6.8.6	Adaptive Inverse Dynamics Control	338
6.8.7	Motion Control in Joint Space	343
6.9	Motion Control of the Stewart–Gough Platform	343
6.9.1	Decentralized PD Control	344
6.9.2	Feed Forward Control	351
6.9.3	Inverse Dynamics Control	354
6.9.4	Partial Linearization IDC	358
6.9.5	Robust Inverse Dynamics Control	360
6.9.6	Motion Control in Joint Space	365
6.9.6.1	Decentralized PD Control	365
6.9.6.2	Feed Forward Control	373
6.9.6.3	Inverse Dynamics Control	376
Problems	382
7.	Force Control	391
7.1	Introduction	391
7.2	Controller Topology	392
7.2.1	Cascade Control	394
7.2.2	Force Feedback in Outer Loop	395
7.2.3	Force Feedback in Inner Loop	397
7.3	Stiffness Control	400
7.3.1	Single-Degree-of-Freedom Stiffness Control	401
7.3.2	General Stiffness Control	405
7.3.3	Stiffness Control of a Planar Manipulator	408
7.3.4	Stiffness Control of the Stewart–Gough Platform	416
7.4	Direct Force Control	423
7.4.1	Force Control of a Planar Manipulator	428
7.4.2	Force Control of the Stewart–Gough Platform	433
7.5	Impedance Control	441
7.5.1	Impedance	443
7.5.2	Impedance Control Concept	445

7.5.3 Impedance Control Structure	448
7.5.4 Impedance Control of a Planar Manipulator	451
7.5.5 Impedance Control of the Stewart–Gough Platform	456
Problems	464
Appendix A: Linear Algebra	477
A.1 Vectors and Matrices	477
A.2 Vector and Matrix Operations	478
A.3 Eigenvalues and Singular Values	480
A.4 Pseudo-Inverse	482
A.4.1 Pseudo-Inverse Properties	483
A.4.2 Linear Inverse Problems	484
A.5 Kronecker Product	485
Appendix B: Trajectory Planning	487
B.1 Point-to-Point Motion	487
B.1.1 Cubic Polynomials	487
B.1.2 Quintic Polynomials	488
B.1.3 Linear Segments with Parabolic Blends	489
B.1.4 Minimum Time Trajectory	490
B.2 Specified Path with Via Points	491
Appendix C: Nonlinear Control Review	493
C.1 Dynamical Systems	493
C.2 Stability Definitions	494
C.3 Lyapunov Stability	495
C.4 Krasovskii–Lasalle Theorem	498
References	501
Index	511
